

Exohood 

WHITEPAPER

Created by Joseph Cohen & Ari Levi

2021

VERSION 1.1

EXOHOOD

Exo: Ancient Greek words, 'Exo', meaning external, and 'planetes', meaning wanderer.

Hood: Hood refers to "Robin Hood," a legendary heroic outlaw originally depicted in English folklore and subsequently featured in literature and film. According to legend, he was a highly skilled archer and swordsman.

THE OBJECTIVE

With this words combination, we look at a simple line, "Freedom" in Exohood. We look for rightness and transparency, DeFi is not entirely honest with rookie users. Many projects that are launched in DEX end up buried. It is necessary to build a DEX with more transparency, accessible to all users, safe, fully decentralized, and powered by the Community Governance; that is why in Exohood, we will take the definitive step to change and do things well achieve a pro-quo. The Exohood Project allows users to earn rewards by providing liquidity using the EXO token. Exohood will be one of many decentralized applications (dApps) that form the Binance ecosystem. Exohood will build a fully decentralized and democratized AMM that puts the community's interests first called (EXOHODIAN).

TOKEN

Exohood token (EXO) is a BEP-20 token standard native to the Binance Smart Chain (BSC). EXO offers in the future great utility within the Exohood ecosystem, including representing governance rights in votes on updates or proposals to the protocol. Additionally, Exo tokens in the future are used as liquidity rewards. The Exohood share of these supply is proportional to the amount of liquidity provided to the protocol; a maximum cap of 120 EXO per block and a minimum supply of 1 EXO per block is in place. The supply of Exohood Token (EXO) is 1,000,000,000 EXO. There can't be more EXO in the future because the MINT contract is finished.

Data

WHY USE EXO TOKEN?

Several reasons are causing people to turn away from Ethereum towards Binance Smart Chain (BSC). BSC is usually faster and cheaper to use than Ethereum. With gas prices reaching incredible heights, many can't afford to use Ethereum-based DeFi protocols. BSC has a fixed transaction fee which can be as low as 1 cent. Furthermore, block confirmation times are around three seconds per block. Also, compared to Ethereum, BSC has a much lower barrier to entry. The Binance ecosystem is thriving at the moment, with several successful projects all supported by one of the largest and most successful blockchain communities around. Complete with Ethereum Virtual Machine (EVM) compatibility, BSC makes it seamless for Solidity developers to go ahead and move to the new BSC platform.

PRODUCTS

EXO CARDS

- **Spend EXO Anywhere**

The ExoCard will let you shop at over 60 million merchants worldwide, both online and in-store. Earn up to 3% in EXO reward and use Apple Pay, Google Pay, and Samsung Pay with your Virtual EXO Debit Card.

- **EXO Rewards**

Every time you spend with your ExoCard, you will receive up to 3% EXO rewards.

DECENTRALIZED EXCHANGE

- **ExoDEX**

Fully decentralized exchange and powered by the Community Governance.

- **Trading**

Start trading EXO Token and other Token right away.

- **Crypto Bridge**

Bridge your Tokens between different Networks.

- **Tor Bridge**

Use Exo Tor bridge in case the DeFi ecosystem is censored in countries with restrictions on financial freedom for all.

PRODUCTS

PRIVATE TRANSACTIONS

- **Exo Private**

Exo Private improves transaction privacy by breaking the on-chain link between source and destination addresses. It uses a smart contract that accepts BNB deposits that a different address can withdraw. To preserve privacy, a relay can be used to remove to an address with no BNB balance. Whenever the new address removes BNB, there is no way to link the withdrawal to the deposit, ensuring complete privacy.

- **Deposit**

A user generates a random key (note) and deposits BNB or a BEP20 token, along with submitting a hash of the note to the Exohood Private smart contract.

- **Wait**

After depositing, users should wait sometime before withdrawing to improve their privacy.

- **Withdraw**

A user submits proof of having the valid key to one of the notes deposited, and the contract transfers BNB or the BEP20 Token to a specific recipient.

PRODUCTS

EXO PROBILLS

- **EXO Lightning Networking Services**

Exo Probills provides products and services that allow anyone to live on EXO more easily. Exo Probills delivers a catalog of gift cards, prepaid mobile refills, and Lightning networking services that can be purchased using EXO token.

NFT MARKETPLACE

- **NFT Services**

Buy, Sell and create your own NFT.

Exohodian Community

- **Governance**

EXO tokens represent voting shares in Exohood governance. You can vote on each proposal yourself.

HOOD ALLIANCE

The Hood Alliance is a group of Binance Smart Chain (BSC) based DeFi projects coming together with the shared mission of adding use cases and boosting the development of the BSC DeFi ecosystem.

Objective of the Hood Alliance

This Alliance strives to find synergies with other developers and teams in the Binance Smart Chain (BSC) ecosystem, with the ultimate goal to add new products and use cases, which will not only improve the utilization rate of current assets on BSC but also attract more users and assets to Binance Smart Chain.

How will Binance Smart Chain benefit from Hood Alliance?

Exohood does not intend to compete with any of the successful BSC-based applications but aims to work closely with the Binance Smart Chain and project teams to reach our community benefits.

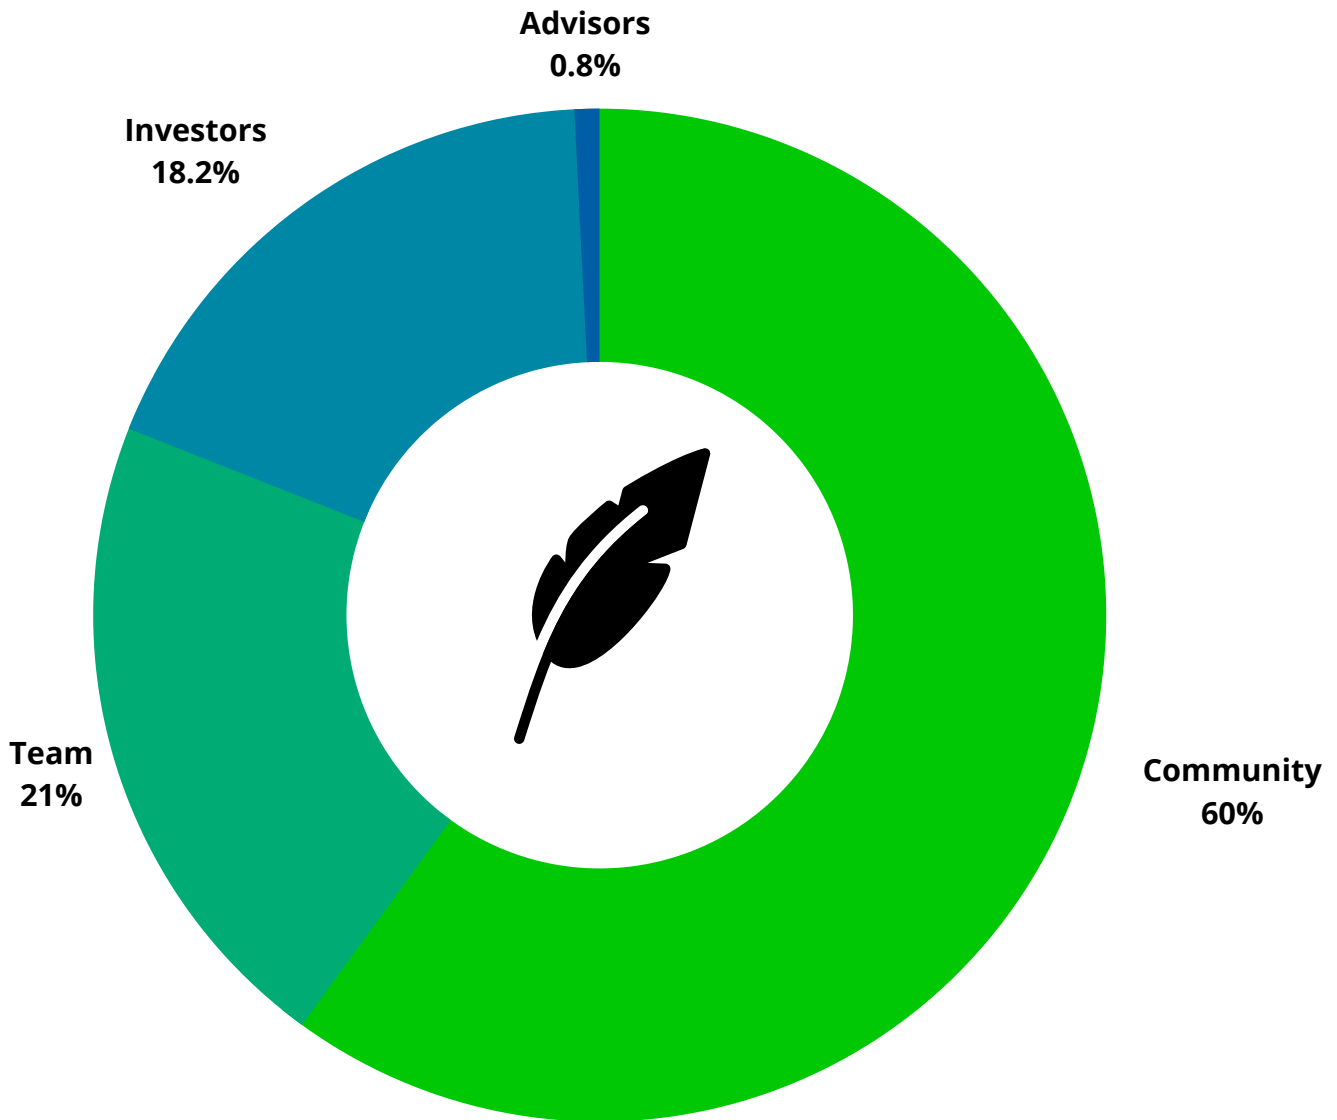

HOOD ALLIANCE

All the projects in the Hood Alliance serve a specific goal to help the BSC ecosystem and utilization rate of BSC assets grow, which can be detailed as the following five points:

- Yield farming helps attract users with high yields from their assets, whether BSC or ETH-based.
- Stable coins liquidity will attract high-value players who want low-risk yields on their stable assets, again BSC or ETH based.
- Lending, borrowing and OTC trading will bring more liquidity across all BSC-based platforms.
- Initial token sales will attract new projects and communities to trade on BSC.
- NFT auctions will create a whole new ecosystem for ERC-721 tokens on BSC.

EXONOMICS

TOTAL SUPPLY: 1.000.000.000 EXO

TOKEN ALLOCATION

COMMUNITY: 600.000.000 EXO

TEAM: 210.000.000 EXO

INVESTORS: 182.000.000 EXO

ADVISORS: 8.000.000 EXO

TOKENOMICS

EXO is the utility token of the Exohood Project and has the following use cases:

- Governance: EXO token holders will vote on platform parameters to navigate the project's economics and developments.
- Incentives: EXO tokens are used to incentivize user participation in bounty hunting, referrals, and other programs in the future.
- NFT Suite: EXO tokens are required for NFT minting, staking, auction, trading, and more.
- System Tax: Users who transact with EXO tokens will contribute to a dividend pool.

Token Specification

- Name: Exohood
- Symbol: EXO
- Network: Binance Smart Chain (BSC)
- Spec: BEP-20
- Precision: 18
- Smart Contract Address
- BSC: 0x7d10b6157c7c577caa62d319dc215209cf2db8c3

Burning Token Address:

0x00dead

ROAD MAP

1. First Stage

- Academic Research
- Project Proposal
- BSC Token Protocol Proposal
- Building Project
- BSC Token Building
- Internal Testing
- BSC Node
- BSC Protocol Exchange
- Testnet BSC System

ROAD MAP

2. Second Stage

Exohood Token Officially Launch

- Smart Contract Verified
- EXO Assets Transfer
- Website Launch (V1.0)
- Supply Smart Contract JulSwap
- Supply Smart Contract PancakeSwap

ROAD MAP

3. Third Stage

EXO DEX BUILDING

- Support Multiple Tokens
- Support More Projects
- Optimize Categories
- Support Multiple Public Chains

EXOCHAIN R&D Launch

- BEP 908 Protocol Closed Testing
- Dividend System (Reward Pool) Closed Testing
- Dwitch (Exohood DEX) Closed Testing
- NFT Casting V2

ROAD MAP

4. Fourth Stage

EXO DEX BUILDING

- NFT Lending
- EXO CHAIN Testnet Testing (Phase 1-2)
- NFT Crosschain Development
- EXO Universe Crosschain Development
- Deploy BSC 908 Protocol in Binance Coin
- Dwitch Beta Testing
- Dividend System Launch

ROAD MAP

5. Fifth Stage

EXO UNIVERSE BUILDING

- EXOCHAIN Testnet Testing (Phase 3)
- EXOCHAIN Node Testing

Deploy and Test in EXOCHAIN:

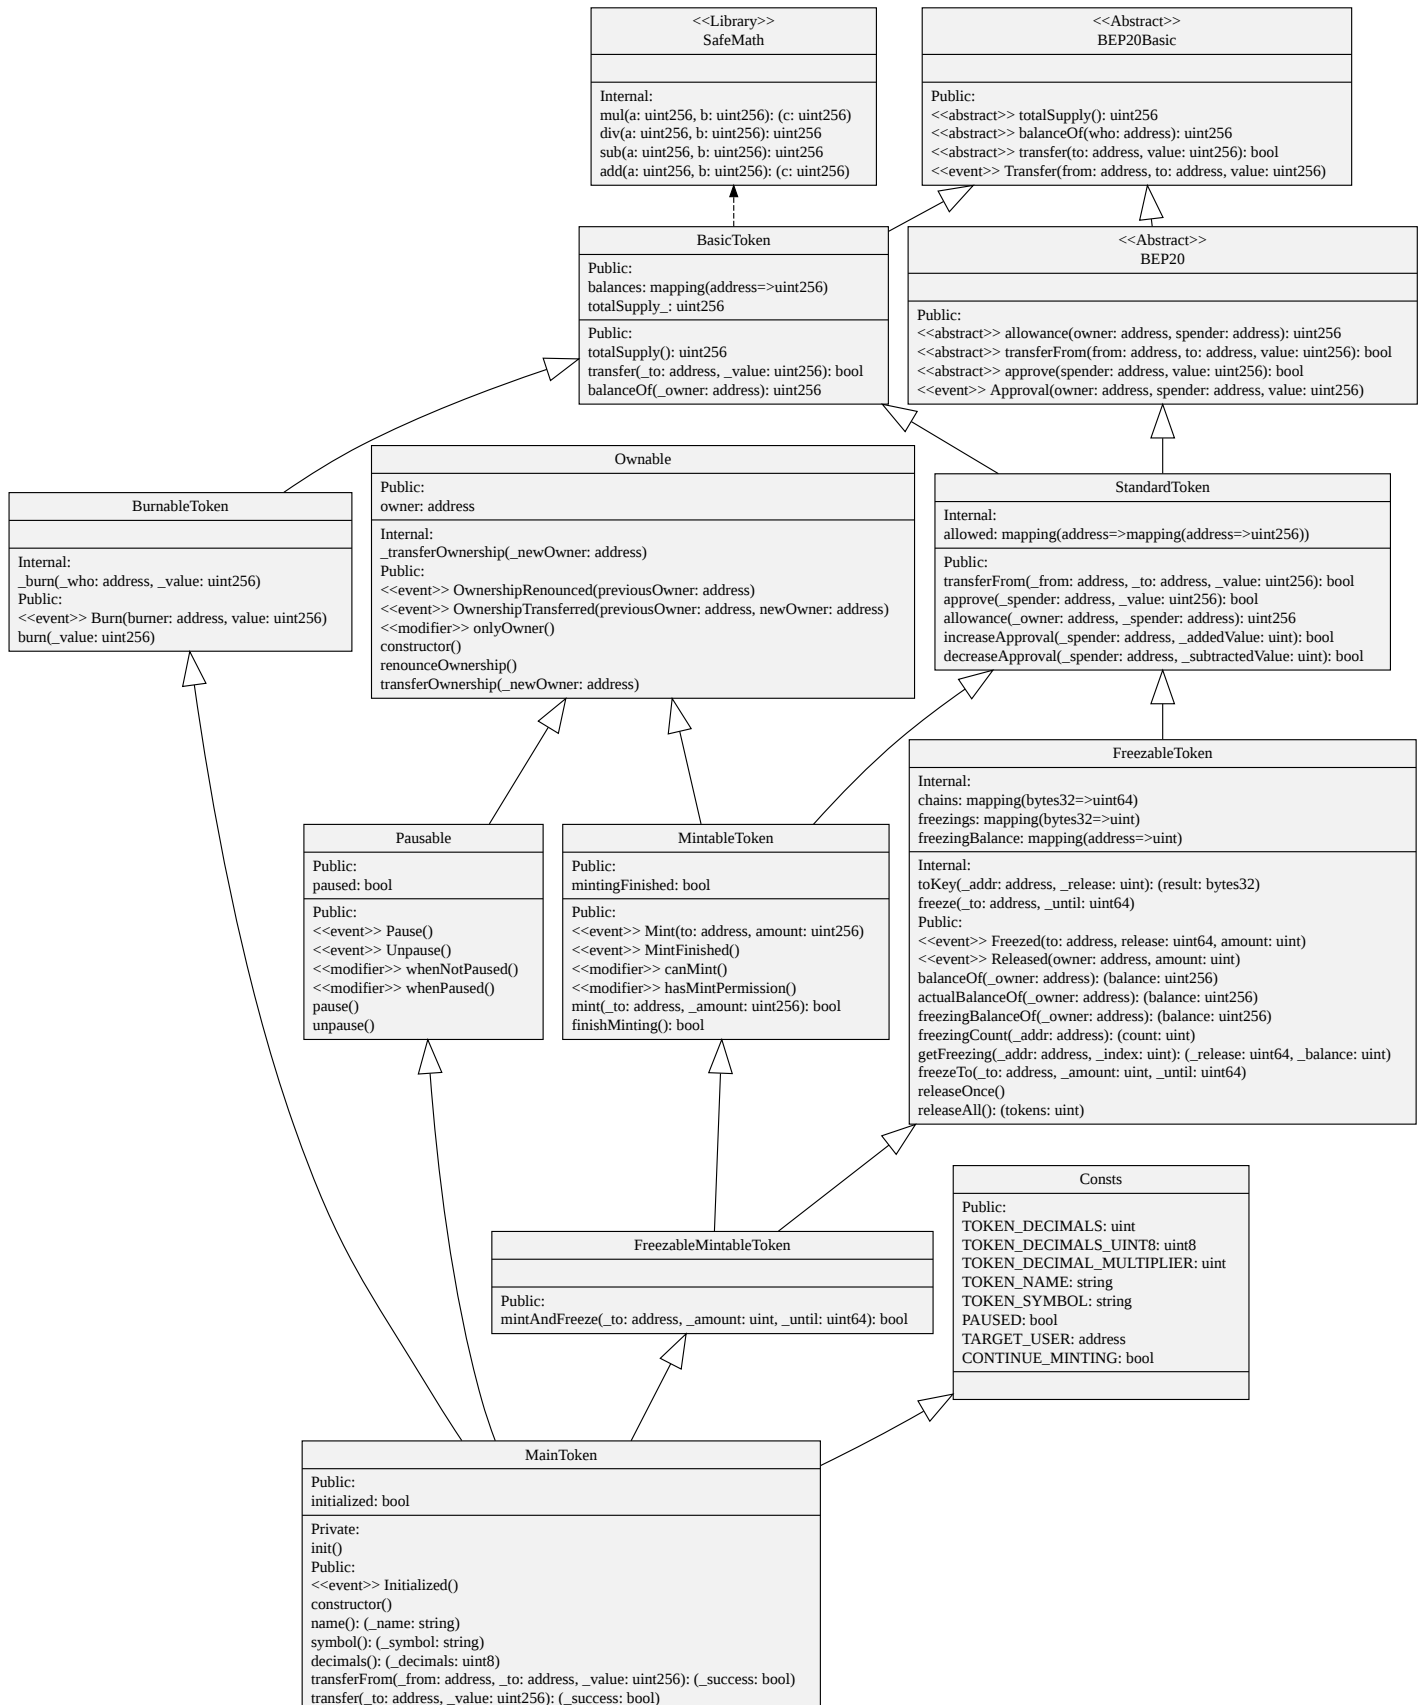

- NFT Casting
- Exo Universe
- Dwitch (swap)
- Dividend System
- NFT Crosschain Protocol

6. Final Stage

- EXOCHAIN Mainnet Officially Launch
- Exo Protocol Deployment & Application

ROAD MAP
